

# Homework1\_dhanushnd

September 8, 2021

## 1 ECE 4554/ ECE 5554 / Computer Vision

This file contains Problems 5 and 6 (the coding problems) for Homework 1. Your job is to implement/modify the sections within this notebook that are marked with "TO DO".

### 1.1 TO DO: Enter your Virginia Tech Username (PID) here: 906465121

### 1.2 Honor Code reminder

Once again, please review the Honor Code statement in the syllabus.

### 1.3 Submission guidelines for the coding problems (Google Colab)

1. Please verify that you have entered your Virginia Tech Username in all of the appropriate places.
2. After clicking Runtime->Run all, verify that all of your solutions are visible in this notebook.
3. Click File->Save near the top of the page to save the latest version of your notebook at Google Drive.
4. Verify that the last 2 cells have executed, creating a PDF version of this notebook at Google Drive. (Note: if you face difficulty with this step, please refer to <https://pypi.org/project/notebook-as-pdf/>)
5. Look at the PDF file and check that all of your solutions are displayed correctly there.
6. Download your notebook file and the PDF version to your laptop.
7. On your laptop, create a ZIP version of this notebook file. (Please don't include the separate data files.) Use file name Homework1\_Code\_USERNAME.zip, with your own Username.
8. For your PDF version, use file name Homework1\_Notebook\_USERNAME.pdf, with your own Username.
9. **Submit these 2 files and your PDF file for Problems 1-4 SEPARATELY to Canvas.** Do not zip them all together.

## 2 Environment Setup

```
[1]: # Mount your Google Drive to this notebook
# The purpose is to allow your code to access to your files
from google.colab import drive
drive.mount('/content/drive')
```

Mounted at /content/drive

```
[2]: # Change the directory to your own working directory
# Any files under your working directory are available to your code
# TO DO: enter the name of your directory
import os
os.chdir('/content/drive/MyDrive')
#os.chdir('/content/drive/MyDrive/Colab Notebooks')
```

```
[3]: # Import library modules
import sys
import cv2
import numpy as np
import matplotlib.pyplot as plt
from PIL import Image # PIL is the Python Imaging Library
```

---

### 3 Problem 5: Working with Python and NumPy (10 points)

- a) Write a brief description of the result of each of the following Python commands. Try to guess the result before running the commands interactively. If needed, check the document that is posted at Canvas (An Introduction to NumPy and SciPy) or the online API documentation at <https://docs.scipy.org/doc/>.

```
[4]: a = np.array([[1,2,3], [4,5,6], [7,8,9]])
b = a[2,:]
c = a.reshape(-1)
d = np.random.randn(5,1)
e = d[d>0]
x = np.zeros(10)+0.5
y = 0.5*np.ones(len(x))
z = x + y
f = np.arange(1,100)
g = a[::-1]
h = np.random.permutation(10)
```

TO DO: Write your descriptions here.

a: It is a 3\*3 matrix from 1 through 9

b: It is the values in the 3rd row of A array 7,8,9 (segmenting)

c: It makes the Array A into one dimensional (Reshaping the 2D array to 1D)

d: it is 5 random variables between -1 and 1 (Standard normal Distribution)

e: All the variables in d who's value is greater than 0

x: Array of elements with 10 elements and 0.5 as their values

y: len(x) = 10, so Array of elements with 10 elements and 0.5 as their values

z: Array of elements with 10 elements and 1 as their values (adding 2 arrays)

f: Array of ascending elements from 1 to 100 and 100 excluded

g: reading the elements in the reverse order [7,8,9], [4,5,6], [1,2,3]

h:randomly choose 10 values

```
[5]: # Verify your answers
#a = np.array([[1,2,3], [4,5,6]])
#print(np.reshape(a, -1))

print(f'a: {a}\n\n b: {b}\n\n c: {c}\n\n d: {d}\n\n e: {e}\n\n x: {x}\n\n y:␣
→{y}\n\n z: {z}\n\n f: {f}\n\n g: {g}\n\n h: {h}')
```

a: [[1 2 3]  
[4 5 6]  
[7 8 9]]

b: [7 8 9]

c: [1 2 3 4 5 6 7 8 9]

d: [[ 1.91295872]  
[-0.39853016]  
[-0.596042 ]  
[ 0.25807344]  
[ 1.34758415]]

e: [1.91295872 0.25807344 1.34758415]

x: [0.5 0.5 0.5 0.5 0.5 0.5 0.5 0.5 0.5 0.5]

y: [0.5 0.5 0.5 0.5 0.5 0.5 0.5 0.5 0.5 0.5]

z: [1. 1. 1. 1. 1. 1. 1. 1. 1. 1.]

f: [ 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24  
25 26 27 28 29 30 31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 47 48  
49 50 51 52 53 54 55 56 57 58 59 60 61 62 63 64 65 66 67 68 69 70 71 72  
73 74 75 76 77 78 79 80 81 82 83 84 85 86 87 88 89 90 91 92 93 94 95 96  
97 98 99]

g: [[7 8 9]  
[4 5 6]  
[1 2 3]]

h: [7 4 1 0 8 5 3 9 6 2]

b) Write a few lines of code to do each of the following.

Let y be the vector: `y = np.array([1, 2, 3, 4, 5, 6])`. Use the reshape command to form a new matrix z that looks like this: `[[1,2],[3,4],[5,6]]`

```
[6]: y = np.array([1, 2, 3, 4, 5, 6])
#####
# TO DO: write the code to create z
z = np.reshape(y, (3,2))

#####
print(f'z: {z}')
```

```
z: [[1 2]
     [3 4]
     [5 6]]
```

Use `np.max` and `np.where` to set `x` to the maximum value that occurs in `z` (from the previous part of this problem), and set `r` to the row location and `c` to the column location where that maximum value occurs. Remember that Python uses 0-indexing.

```
[7]: #####
# TO DO: write the code to assign values to x, r, and c
x= np.max(z)

q = np.where(z==x)
r= q[0]
c = q[1]
#####
print(f'x: {x}\nr: {r}\nc: {c}')
```

```
x: 6
r: [2]
c: [1]
```

Let `v` be the vector: `v = np.array([1, 8, 8, 2, 1, 3, 9, 8])`. To a new variable `x`, assign the number of 1's that are present in the vector `v`.

```
[8]: v = np.array([1, 8, 8, 2, 1, 3, 9, 8])
#####
# TO DO: write the code
x=0
for i in v:
    if i == 1:
        x= x +1
#####
print(f'x: {x}')
```

```
x: 2
```

Use `np.random.randint` and create an array named `u` that contains the result of rolling a six-sided die over `N` trials. (You can pick a convenient value for `N`.)

```
[45]: #####
# TO DO: write the code
# lower bound 1 upperbound 7 as 7 is not included and N=10
u = np.random.randint(1,7,10)
#####
print(f'dice: {u}')
```

dice: [3 6 6 1 5 4 1 2 5 3]

c) Write code to do the following things.

Create a 100 x 100 matrix named *mat*. Assign any convenient *integer* values to *mat*, without all elements being identical. (In a later step you will look at the histogram of *mat*, and create new matrices based on *mat*.)

```
[46]: #####
# TO DO: write the code
# The following is a temporary assignment;
# try it, just for illustration of imshow(), and then replace with your code
#mat = np.array([[1,2,3], [4,5,6]])

mat = np.random.randint(1,225,size=(100,100))

#####
# The next line should display your matrix mat as an image
# Notice that matplotlib.pyplot may color-code the values that are displayed
plt.imshow(mat, interpolation='none')
print(f'shape of mat: {mat.shape}')
```

shape of mat: (100, 100)

Plot a histogram of mat's intensities with 20 bins.

```
[47]: #####
# TO DO: write the code
#plt.hist(np.histogram(mat,bins=20))

plt.hist(mat.reshape(-1),bins=20,rwidth=.5)

#####
```

```
[47]: (array([571., 496., 507., 505., 521., 495., 516., 496., 493., 485., 488.,
        524., 488., 554., 466., 452., 485., 439., 490., 529.]),
      array([ 1. , 12.15, 23.3 , 34.45, 45.6 , 56.75, 67.9 , 79.05,
        90.2 , 101.35, 112.5 , 123.65, 134.8 , 145.95, 157.1 , 168.25,
        179.4 , 190.55, 201.7 , 212.85, 224.  ]),
      <a list of 20 Patch objects>)
```

Create a new matrix mat2 that consists of the lower left quadrant of mat.

```
[48]: #####
# TO DO: write the code
mat2 = mat[50:100,0:50]

plt.imshow(mat2, interpolation='none')
print(f'shape of mat2: {mat2.shape}')
```

```
#####
```

shape of mat2: (50, 50)

Create a new matrix mat3 that is the same as mat2, but with mat2's mean intensity subtracted from every element. Display mat3 just as the previous examples displayed mat and mat2.

```
[49]: #####
# TO DO: write the code
mean2 = np.average(mat2)
print(f'mean : {mean2}')
mat3 = mat2-mean2

plt.imshow(mat3, interpolation='none')
print(f'shape of mat: {mat3.shape}')
#####
print(f'array = {mat3.astype(int)}')
#mat3 = mat3.astype(int)
```

```
mean : 111.842
shape of mat: (50, 50)
array = [[ -10 -104 -108 ...   34   77  106]
 [ -89   16  -22 ...   45   61    3]
 [  48  111  -74 ...   56   42  -79]
 ...
 [ -82  -91   38 ...    0  -60   47]
```

```
[ 94 100 -75 ... -23 20 109]
[-83 -33 -73 ... 86 -53 3]]
```

Create a new matrix `mat4` that represents a color image that is the same size as `mat3`, but with 3 channels to represent Red, Green, and Blue values. Set the values in `mat4` to be red (i.e.,  $R = 255$ ,  $G = 0$ ,  $B = 0$ ) wherever the intensity in `mat3` is greater than a threshold  $t = \text{the average intensity in } mat2$ , and black everywhere else. Be careful with type-casting. Display `mat4` just as was done for the previous examples.

```
[50]: #####
# TO DO: write the code
w = mat3.shape[0]
h = mat3.shape[1]
t = mean2
mat4= np.zeros((w,h,3), 'uint8')
for i in range (0,w-1):
    for j in range (0,h-1):
        mat4[i,j] = np.where(mat3[i, j] >=t, (255,0,0),(0,0,0))

#print(f'array4 = {mat4}')
#plt.imshow(mat4, interpolation='none')
print(f'shape of mat: {mat4.shape}')
plt.imshow(mat4, interpolation='none')
#####
```

```
shape of mat: (50, 50, 3)
```

[50]: <matplotlib.image.AxesImage at 0x7fa54ad670d0>

#### 4 Problem 6: Generating new images (10 points)

Write Python/OpenCV code that will input an image, and then create new images to simulate reduced resolution similar to Dr. Jones's example (family portrait) in the first set of lecture slides.

First, verify that you can read an image and convert it to grayscale format. (You must first upload mandrill.tif to your working directory)

```
[16]: # This example uses cv2_imshow to display an image
# (Note: cv2.imshow is not allowed in Colab)
from google.colab.patches import cv2_imshow

img_color = cv2.imread("Comp Vision/mandrill.tif", cv2.IMREAD_COLOR)
cv2_imshow(img_color)

print ('\n')
img_grayscale = cv2.cvtColor(img_color, cv2.COLOR_BGR2GRAY)
cv2_imshow(img_grayscale)
```

Next, write a Python function that accepts a grayscale image as input. You may assume that the input image is of size  $512 \times 512$ . The function must iteratively create and display new images *of the same size*. (All new images should be of size  $512 \times 512$ .) However, in these new images, groups of pixels appear to be "merged" to form larger pixels. Each new image *appears* to have half as many pixels in both height and width:  $512 \times 512 \rightarrow 256 \times 256 \rightarrow 128 \times 128 \rightarrow \dots \rightarrow 4 \times 4 \rightarrow 2 \times 2 \rightarrow 1 \times 1$ . To go from apparent image size  $N \times N$  to  $N/2 \times N/2$ , your code should simply compute the average intensity from  $2 \times 2$  pixel blocks in the first image, and assign that average value to all of the corresponding pixels in the next image.

For full credit, use a loop to generate the new images.

```
[17]: def simulate_lower_resolution(img):  
      '''Create new images that appear to have lower resolution.  
  
      Input:
```

*img: a grayscale image of size 512 x 512*

*Output:*

*display a sequence of images, each of size 512 x 512*

*TO DO: implement the function.*

```
'''
print(img.shape)
for k in range(1,10):
    for i in range(0,img.shape[0],2**k):
        for j in range(0,img.shape[1],2**k):
            img[i:i+2**k,j:j+2**k]= np.mean(img[i:i+2**k,j:j+2**k])

    cv2_imshow(img)
    print('Step Size ',2**k)

return
```

Test your function. The output should be a display of 10 images, starting with the grayscale image at full resolution, and ending with an image that appears to be a single, very large pixel (one gray value).

```
[18]: simulate_lower_resolution(img_grayscale)
```

(512, 512)

Step Size 2

Step Size 4

Step Size 8

Step Size 16

Step Size 32

Step Size 64

Step Size 128

Step Size 256

Step Size 512

---

## 5 Creating a PDF version of your current notebook

```
[56]: #The following two installation steps are needed to generate a PDF version of ↵  
      ↪the notebook  
      #(These lines are needed within Google Colab, but are not needed within a local ↵  
      ↪version of Jupyter notebook)  
      !apt-get -qq install texlive texlive-xetex texlive-latex-extra pandoc inkscape  
      !pip install --quiet py pandoc
```

```
